Easy Energy Savings with the Insulated Leveler Blanket™

Easy Energy Savings with the Insulated Leveler Blanket™

Dock Levelers are energy hogs at your loading dock. Energy can be lost through the side gaps, the bottom door seal or by heat transfer through the dock leveler plate. Energy loss at your loading dock is a major drag on chillers, heating systems, and maintaining dock temperature for food safety. Lastly, energy loss has a negative impact on your operational expenses.

The Leveler Blanket's simple design makes it convenient to place and re-set over your leveler so energy savings is easy when your door is not in use. Whether you use the Leveler Blanket™ between each load or between each shift, savings are immediate and effortless.

In most locations Leveler Blanket™ offers a 1-year payback when used for only 8 hours per day.

Why wait? Talk to your local sales representative today to learn how you can save money and stop wasting energy.

**"X" marks the spot
where you can EASILY
save money and GO GREEN!**

The diagram above demonstrates how outside heat (or cold) can be transferred through the leveler plate and how air flows through the gaps around the leveler and through the gap at the bottom seal of your dock door. Using the Leveler Blanket™ between each load or between each shift will greatly reduce the amount of wasted energy.
